FEDERAL INSTITUTE OF SCIENCE AND TECHNOLOGY (FISAT)
DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING
SEMESTER VI
MINI PROJECT

ACADEMIC YEAR : 2025-26 **BATCH : CSE_A/CSE_B/CSE_C/CSD**

Project Title : Startup & Freelancer Incubation Management System

Team Members : UNNIMAYA M, THEJASREE V P, NIKITA MARY JASON, NANDANA BIJULAL

Project Guide (Name) : REMYA R

Type of project : ☑ **Application** ☐ **Product** ☐ **Research** ☐ **Review**

Complexity of the project : ☐ **Low** ☑ **Medium** ☐ **High**

WP mapping

Sl No	Working Parameters	Whether Addressed	Justification
1	WP1 - Depth of knowledge required	☑	Requires knowledge of web architecture, Django, databases, RBAC, and AI integration.
2	WP2 - Range of conflicting requirements	☑	Multiple stakeholders with different needs and permissions create conflicting requirements.
3	WP3 - Depth of analysis required	☑	Workflow analysis needed for proposals, assignments, ratings, and sessions.
4	WP4 - Familiarity of issues	☑	Domain is moderately familiar but needs tailored incubation workflows.

5	WP5 - Extent of applicable codes and standards	☑	Adheres to security, privacy, and data handling best practices for web systems.
6	WP6 - Extent of stakeholder involvement and conflicting requirements	☑	Involves startups, freelancers, mentors, and admin with approval and notification flows.
7	WP7 - Interdependence	☑	Modules are interdependent: projects, proposals, assignments, milestones, ratings.

Justification Summary

Multi-role workflows, interdependent modules, and AI-assisted verification make this a medium-to-high complexity application.

Project Mapping

PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PSO1	PSO2
3	3	3	2	3	1	1	1	2	2	2	3	3

Mapping Justification

S No	PO/PSO	Justification
1	PO1	Apply computing and engineering knowledge to build the full-stack system.
2	PO2	Analyze multi-role requirements, permissions, and data integrity constraints.

Mapping Justification

Sl No	PO/PSO	Justification
3	PO3	Design and develop modular Django apps and workflows.
4	PO4	Evaluate AI verification/ranking approaches and system behavior.
5	PO5	Use modern tools: Django ORM, AI APIs, Git, and web security practices.
6	PO6	Supports societal need for fair access to work opportunities.
7	PO7	Remote collaboration reduces travel and supports sustainability.
8	PO8	Ensures ethical handling of user data and verification artifacts.
9	PO9	Team-based module development and integration.
10	PO10	Clear UI/UX and documentation for stakeholders.
11	PO11	Planning and tracking features, milestones, and delivery timelines.

Mapping Justification

Sl No	PO/PSO	Justification
12	PSO1	Apply computing fundamentals to build scalable web systems.
13	PSO2	Use modern tools and AI services for intelligent verification and ranking.

SDG Alignment:
(*Mention relevant SDG number and short justification & whether SDG alignment is indirect / exploratory in nature.)* **:**

SDG 8 (Decent Work & Economic Growth) -indirect.
SDG 9 (Industry, Innovation & Infrastructure) - indirect.

Explain how specific features of your project implementation contribute to the chosen SDG(s):

The platform connects startups with freelancers, improves employability through mentorship, and increases trust via AI verification and structured proposals.

Social / Economic / Environmental Impact :
(Include :

- *Who benefits from the project outcome?*
- *Is there measurable improvement? (efficiency, accessibility, affordability, sustainability, etc.))*

Benefits startups, freelancers, and mentors by improving access to opportunities, reducing hiring friction, and enabling remote collaboration. Efficiency and affordability are improved through a centralized platform.

Future Enhancements & Long-Term SDG Relevance :

Future enhancements: escrow/payments, richer analytics, mobile app, smarter AI matching, and integrations with calendars and external job platforms. Long?term relevance supports inclusive growth (SDG 8/9).

Signature (Project Guide) :
